# Vulnerability Assessment Report

1. Executive Summary

- Assessment Date: July 2025
- Assessment Type: Network Vulnerability Assessment using Nmap
- Scope: Identification of open ports and potential vulnerabilities in the scanned systems.
- Objective: To detect exposed services and assess the potential security risks associated with them.
- Disclaimer: This report is based solely on the scan results using Nmap and may not include vulnerabilities hidden due to network restrictions or unavailable systems.

2. Scan Results

The assessment was conducted using Nmap to identify open ports, running services, and known vulnerabilities.

Scan Tasks

Take the IP 192.168.123.249 for scan the vulnerability.
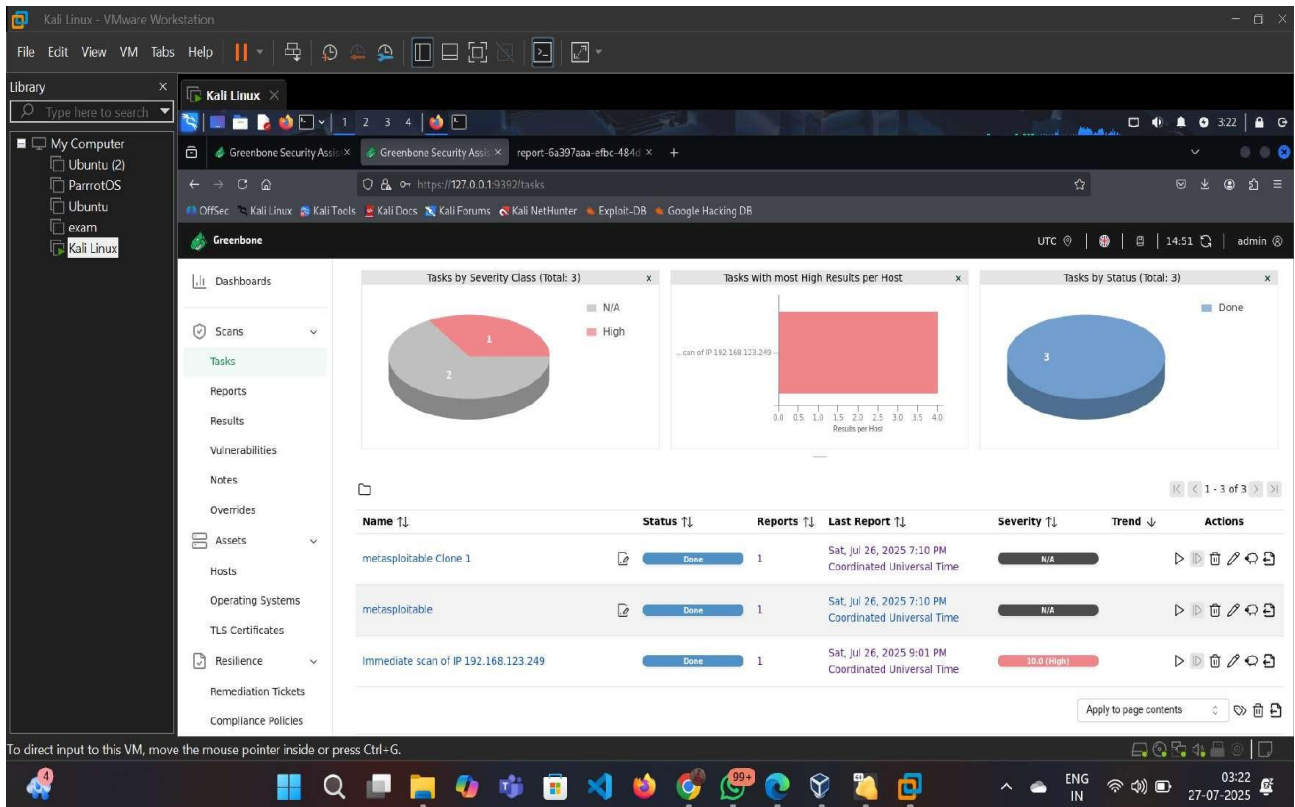

Complete the task scan.

Reports

Then they give repots of the task scans.
